

# G5238MK

## Digital QR PSR Power Switch with Peak Load

Digital Power™

### 1.0 General Description

The G5238MK is a high performance AC/DC power supply controller which uses digital control technology to build peak current mode PWM flyback power supplies. The device operates in quasi-resonant mode to provide high efficiency along with a number of key built-in protection features while minimizing the external component count, simplifying EMI design and lowering the total bill of material cost. The device can operate at peak power mode with momentary peak power higher than the maximum continuous output power without design cost and size increase. The G5238MK removes the need for secondary feedback circuit while achieving excellent line and load regulation. It also eliminates the need for loop compensation components while maintaining stability over all operating conditions. The built-in power limit function enables optimized transformer design in universal off-line applications and allows for a wide input voltage range. GlobalSemi's innovative proprietary technology ensures that power supplies built with the G5238MK can achieve both highest average active efficiency and have fast dynamic load response in a compact form factor in typical applications.

#### Features

- ◆ No-load power consumption < 75 mW at 230 VAC along with fast dynamic load response
- ◆ Tight constant-voltage regulation across line and load range
- ◆ Peak power mode provides momentary peak power higher than the maximum continuous output power without design cost and size increase
- ◆ Primary-side feedback eliminates opto-isolators and simplifies design
- ◆ Proprietary optimized 90 kHz maximum PWM switching frequency with quasi-resonant operation
- ◆ No external loop compensation components required
- ◆ User-configurable 5-level cable drop
- ◆ Built-in single-point fault protection features: output short-circuit protection, output over-voltage protection, over-current protection, current-sense-resistor fault protection.
- ◆ No audible noise over entire operating range

#### Applications

- Compact AC/DC adapter/chargers for media tablets and smart phones
- AC/DC adapters for consumer electronics

#### TYPICAL Application

## G5238MK

### Digital QR mode PSR PWM Power Switch with Peak Load

## 2.0 Products Information

### 2.1 Pin configuration

Figure2.1: G5238MK Series (7 Lead SOP7 Package)

Pin#	Name	I/O	Description
1	VCC	Power Input	Power supply for the controller during normal operation. The controller will start up when VCC reaches 14.0 V (typical) and will shut down when the VCC voltage drops below 6.5 V (typical). A decoupling capacitor of 0.1 $\mu$ F or so should be connected between the VCC pin and GND.
2	V <sub>SENSE</sub>	Analog Input	Sense signal input from auxiliary winding. This provides the secondary voltage feedback used for output regulation..
3	I <sub>SENSE</sub>	Analog Input	Primary current sense. Used for cycle-by-cycle peak current control and limit.
4	SOURCE	SOURCE	HV MOSFET Source Pin.The Source pin is connected to the Primary current sense resistor.
5/6	DRAIN	Output	HV MOSFET Drain Pin.The Drain pin is connected to the primary lead of the transformer
7	GND	Ground	Ground.
